

Interview with professor Luc Montagnier by doctor Jean-François Lemoine

Health site: Medical Frequency and Why Doctor
(Thursday April 16, 2020)

Dr Jean-François Lemoine

Hello, it's Thursday, April 16. Very special edition, because today it is devoted to a single, exclusive, but important testimony. At a time when the Chinese version of the Coronavirus eruption (COVID 19) in our lives is particularly undermined, on all sides, and when doubt begins to do its work, Professor Luc Montagnier sets off a bomb, exclusively, in our newspaper. Let us not forget that he is a Nobel Prize in medicine, and he tells a whole other story than the official chinese version: bat, popular market of Wuhan, bad luck,... to return the origin to the virology laboratory of Wuhan , where some research would have crossed limits, probably in the last quarter of 2019, with the global consequences that we are measuring today. So listen to it. The argument is supported. Impossible at our level to verify it. And, of course, I asked him the question of conspiracy which will inevitably be raised.

Professor Luc Montagnier, hello!

This Coronavirus (COVID 19) has been decoded relatively easily compared to others, such as that of HIV which won you your Nobel Prize in Medicine; but according to you this decryption is incomplete.

Pr Luc Montagnier

Wuhan's laboratory has specialized in Coronaviruses since the early 2000s. They have expertise in this area, which prompted me to look closely at the description of the genome of this Coronavirus (COVID 19). That is to say the nucleic acid sequence of this virus which is an RNA. This is how this analysis began, which was made not only by me, but also, above all, by my mathematician colleague Jean-Claude Pérez, who now continues to develop what I would call a bio-mathematics, that is to say display the application of mathematics to biology. So he actually delved into the smallest details of the COVID 19 genome sequence. We were not the first, since a group of Indian researchers has published, or rather tried to publish, an analysis which shows that the complete genome of this new virus, Coronavirus, has sequences from another virus which, surprisingly, for me, is that of another virus which is HIV, the AIDS virus. This was published by the Indian group. He was forced to retract, because there is enormous pressure on all this, to prevent the truth from being revealed. But scientific truth always ends up dominating, with the emergence of everything we want to hide.

Dr Jean-François Lemoine

You can understand that finding pieces of HIV in this Coronavirus must have troubled you; but is it not simply a natural mutation of this virus in the body of an AIDS patient?

Pr Luc Montagnier

No ! because, if you want, to insert an HIV sequence into the genome of this Coronavirus, you need molecular tools. The patient is not going to do it; he's the laboratory man. A few years ago it was tricky, but now it's much easier.

Dr Jean-François Lemoine

This natural hypothesis having been lifted, it can only be a deliberate maneuver

Pr Luc Montagnier

So the assumption is that this virus leaves the Wuhan laboratory, which is a high security laboratory. This virus has escaped, perhaps its promoters, and therefore the history of the fish market is a great legend, if you ask me. There is very little chance that this is possible. Initially they worked on a model of Coronavirus which is a bat virus, and it is this virus that they modified.

Dr Jean-François Lemoine

But was their goal to make a biological weapon, an aggressive virus, or, what would be more tolerable, to make an AIDS vaccine?

Pr Luc Montagnier

I think, and this is the hypothesis which seems to me the most rational, that they wanted to make a vaccine against HIV, using a Coronavirus which, in principle, can be attenuated, and not give disease, like vector carrying antigens, that is to say parts of molecules of the AIDS virus, which can be used for a vaccine.

Dr Jean-François Lemoine

So this is the story of the watered sprinkler, tragic version!

Pr Luc Montagnier

Here ! It's a sorcerer's apprentice job, if you will.

We know a lot about molecular biology. We can do DIY; but we forgot, or rather we did not perceive, the fact that with our ancestors we have been in nature for millions of years. Nature does not tolerate anything, that is to say that there are harmonizations. This is what my colleague Jean-Claude Pérez has developed a lot in recent years; nature does not tolerate any molecular construction, or, if it suffers, it tries to eliminate them.

Dr Jean-François Lemoine

And that's what's going on. According to you, nature offers us a catch-up.

Pr Luc Montagnier

So, this is the second part of my message. What is happening is that nature eliminates these foreign bodies from the genome of this Coronavirus (COVID 19), and we are witnessing a number of spectacular mutations, so-called deletions, by this remove pieces of HIV that have been altered. Nature spontaneously removes them, as this Coronavirus passes from one patient to another. We see it now, especially on the American patients who were the last infected, those on the west Pacific coast of the United States. In Seattle, for example, the COVID 19 that infects begins a huge collapse, by deletions in this small part of its genome.

Dr Jean-François Lemoine

A glimmer of hope!

Pr Luc Montagnier

A glimmer of hope that suggests that, even if we do nothing, things will get better. But still at the cost of many deaths.

I have a proposal to speed up these healings. But I need a lot of means. I think it is possible with interfering waves that would eliminate, including in patients, the HIV RNA sequences inserted into the genome of the COVID 19 Coronavirus.

Dr Jean-François Lemoine

Everything you have just explained to us, Professor Montagnier, is both clear but also terrifying. You have the credibility of the recognized researcher and the aura of your Nobel Prize. But don't we risk accusing you of being a conspirator?

Pr Luc Montagnier

No, the conspirators are more like the reverse camp, the one who hides the truth. I have a lot of friends in China, and I value China. I spent several weeks in China just before the story of the Coronavirus.

I think the Chinese government would make things much easier by recognizing what happened in its high security laboratory in Wuhan. Anyway, the truth will come out. What I said about the insertion of foreign sequences, there are not only the sequences of the HIV retrovirus (AIDS virus), there are also other sequences of the germ of malaria, etc.

So all of this indicates that a few people - I don't know who, it's not my role to accuse anyone - may have had the idea, perhaps, of getting an AIDS vaccine, inserting HIV sequences into the genome of this Coronavirus, which led to COVID 19.

If the Chinese government recognizes it, it would make things easier, but it is up to them to shoulder their responsibilities. I repeat that the fact of currently banning the publication of Indian researchers on the origin of this coronavirus (COVID 19), without having the visa of the Chinese government authorities, is an aberration, and, above all, it gives the impression that science now does not depend on the truth, nor on the reality of things, but on the will of people.

It's very, very, bad for the reputation of science. No one will trust what you are told about science when the results are made, right.

This is a very bad position, and I hope that the Chinese government will go all the way. They are starting to recognize that work has been done on the Coronavirus. You should know that there has been significant American financial assistance, at least, and perhaps also scientific, to these Chinese teams. So the origin of this case is not only Chinese. My goal is not to make a police investigation and to accuse people. I think it is a mistake of the Chinese government: Errare Humanum Est!

Another pressing example: Iran killed many people on a plane, mistakenly. They recognized him.

Dr Jean-François Lemoine

Thank you Professor Montagnier. It's clear and chilling!
